

Your restaurant. Your team. One clear way to work.

Illustrated user guide

For owners, outlet managers and crew. A practical reference for setting up your workspace, running a shift and building team capability.

The owner hub: choose the module for the work you need to do. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

Edition 1.0 | 5 October 2026

Screenshots were captured from the actual local application with fictional, read-only demo records. No real employee, customer or restaurant records are included. Empty demo charts are examples, not a statement about your business.

Your available modules depend on your role, outlet assignment and owner permissions. Buttons and menus may change with future releases. This guide is not proof that a feature is enabled for your account.

Find your next step

Read chapters 1-6 when setting up. Managers then use chapters 7-17. Crew can begin with chapters 2, 8, 10, 12 and 14.

- 01 Start your trial and sign in | page 3
- 02 Install the phone home-screen app | page 4

- 16 Prepare HR letters and documents | page 18
- 17 Recognition, login audit and maintenance | page 19
- 18 Optional modules and tenant boundaries | page 20
- 19 Troubleshooting and your daily routine | page 21

Large screenshot reference plates follow the chapters, starting on page 22.

Safety first

Read-only demo screenshots illustrate the interface. This guide contains no credentials and no real staff records. Follow your permissions, company procedures and local requirements.

Start your trial and sign in

The public website explains the product. The app is where your workspace and daily records live.

How to use it

1. Choose Start my free month on the website. Enter your business name, tenant identifier, owner name, work email, password and outlets.
2. Open the verification email and verify the address. Check spam if needed. Return to the signup page and choose I verified my email, or Already registered? Activate your verified account.
3. Enter the same email and password to activate. The 30-day period starts at activation, not merely when you fill out the form.
4. On the confirmation screen, check the trial end date. Choose Open Neko Pulse or View user guide (PDF). Bookmark the app login link.
5. If the app asks you to sign in, choose Manager sign in. Owners and managers use their email/password; crew use their assigned Crew Code.
6. If email delivery fails but activation succeeds, use the displayed app link. Do not create another account just to get another email.

Check before moving on

A welcome email may depend on your platform operator configuring a sending service. A provider accepting an email is not the same as confirmed inbox delivery. Passwords are never sent in the welcome email.

The trial does not charge automatically. Subscription/payment availability is separate from login and must be confirmed with the platform operator.

Install the phone home-screen app

Neko Pulse can open like an app from an icon on your phone. Install the operational app page, not the marketing website.

How to use it

1. iPhone/iPad: open the app login page in Safari. Tap Share (or More, then Share).
2. Choose Add to Home Screen. If offered, keep Open as Web App enabled, then tap Add.
3. Android: open the app in Chrome. Use the three-dot menu and choose Add to home screen or Install app. Confirm the prompt.
4. Tap the new Neko Pulse icon. Sign in with your own credentials. A separate sign-in may be needed in the installed app.
5. If the installation option is missing, open the link directly in Safari or Chrome rather than inside WhatsApp or another in-app browser.
6. When an update notice appears, save unfinished work before updating. Keep an internet connection for attendance, tasks and other live operations.

Check before moving on

Adding an icon does not give extra permissions, make attendance valid away from the store, or guarantee a permanent login. Do not save an owner session on a shared crew device.

Official instructions: support.apple.com/en-lamr/guide/iphone/iphea86e5236/ios and support.google.com/chrome/answer/9658361. Browser wording varies.

Know who does what

Access has two parts: which modules a person may use and which outlets they may manage.

Find the module cards on the owner hub. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Owner: configure the restaurant, manage employees and permissions, review reports and approve sensitive changes.
2. Outlet manager: run the authorised outlet or outlets, plan shifts, assign work, manage training and follow up on problems.
3. Crew: use their personal app for assigned work, shifts and learning. An authorised counter role may have additional operational tools.
4. Trainer/assessor: use only the practical-training actions their account is authorised to perform.
5. Platform administrator: manage the software platform and tenants. This is not automatically the same as a restaurant owner.
6. Open a module from the hub. Use the back arrow to return; use Logout on shared devices.

Check before moving on

Do not share one owner login among staff. Never grant the Owner role simply to make a missing button appear. Ask the owner to review the proper module and outlet permissions.

Set up stores and time settings

Stores provide the stable outlet identifiers used by employees, shifts, tasks and training.

The screenshot shows the 'Add New Outlet' form in the Neko Pulse app. The form is titled 'Add New Outlet' and is divided into two main sections: 'STORE BASICS' and 'REGULATORY INFORMATION'. Under 'STORE BASICS', there are fields for 'Store Name' and 'Outlet ID', a checkbox for 'Store is active' (which is checked), and a 'FULL ADDRESS' field. Under 'REGULATORY INFORMATION', there are fields for 'FSSAI License Number' and 'GSTIN GST Number', each with an 'Upload' button. A 'Save Store' button is at the bottom right. Below the form, a preview of the 'Demo Café - Main Outlet' is shown, indicating it is 'Active' and has a 'Demonstration address'.

Timezone configuration, outlet fields and active status. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Open Stores. Review Global App Configuration and set the business timezone, then save.
2. In Add New Outlet, enter Store Name, a unique stable Outlet ID and the address.
3. Keep Store is active selected for an operating outlet. Add regulatory details and certificates where appropriate.
4. Choose Save Store. Confirm the new outlet is listed and active.
5. To change an existing outlet, use its edit action and review the saved result.
6. To close an outlet, use its close action only after planning what should happen to staff and future work.

Check before moving on

Closed outlets are excluded from new operational work. Do not rename or reuse stable outlet identifiers casually. An outlet is part of your tenant, not a new tenant.

Create staff and managers

Create a separate profile for each person. Select Staff Directory or Managers according to the type of account.

Employee directory and Add Profile fields. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Open Employees and choose the relevant directory. Choose Add New.
2. Enter the person's name and relevant details. Add a photo only with the appropriate consent.
3. For staff, select the role, store and Crew Code/PIN. Keep the code private and unique.
4. For managers, use the manager account fields for email/login. Review the primary outlet and any additional managed-outlet or all-outlet controls shown.
5. Save the profile, then confirm it appears in the correct directory. Share login instructions privately, not in public screenshots.
6. Use edit for corrections. When someone leaves, review active status and access rather than deleting audit history casually.

Check before moving on

A person assigned to several managed outlets should only receive the outlets they need. Personal information, leave balances and employment dates should be checked before saving.

Give the right access

The Access Control Matrix controls module and crew-feature availability by role. Outlet membership remains a separate boundary.

ACCESS			
CREW_ORDERS	☐	☐	☐
CREW_TASKS	☐	☐	☐
CREW_RECIPE	☐	☐	☐
CREW_SHIFTS	☐	☐	☐
CREW_EOM	☐	☐	☐

TASKS	☐	☐	☐
EMPLOYEE	☐	☐	☐
STORES	☐	☐	☐
SHIFTS	☐	☐	☐
EOM	☐	☐	☐
ATTENDANCE	☐	☐	☐

Rows represent features; columns represent roles. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Open Access. Find the role column and the module or feature row.
2. For a manager role, select the admin modules needed for their work.
3. For crew, select relevant Crew App Features, such as tasks, shifts, training or development.
4. Review the separate Crew App Admin Tools section carefully: it exposes management pages inside the staff app.
5. Choose Save Changes. Test using the intended role, not the owner account.
6. If a manager needs multiple stores, review their employee/manager outlet assignment as well as the matrix.

Check before moving on

Use least privilege. A checked module does not authorise another tenant's data. Some protected functions remain reserved for security administrators.

Create and assign daily tasks

Task definitions describe recurring work; completion logs show what happened on a particular day.

Tasks tab, filters and + New Task. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Open Task Manager and select Tasks. Use store, frequency and search filters to find existing work first.
2. Choose + New Task. Complete the title, instructions and outlet fields provided by the editor.
3. Choose the appropriate schedule/frequency and assignment controls. Select eligible people or roles as offered.
4. Set any required completion proof. Make instructions specific: what good looks like, when it is due, and who should act.
5. Save, then confirm the task appears in the list. Check the Monitor tab for today's expected instances.
6. Use Templates for repeatable definitions and Alerts for the available reminder settings. Avoid making duplicate tasks for the same job.

Check before moving on

Example: "Clean the bar before opening; follow the hygiene standard and attach the required photo." Training teaches competence; a task records today's execution.

Follow up on tasks

Use the monitor to distinguish completed, overdue and scheduled work instead of assuming a task was done.

How to use it

1. Manager: open Monitor, choose TODAY, YESTERDAY, WEEK, MONTH or QUARTER, then filter by store.
2. Review completion counts and compliance. Use All Tasks, Completed, Overdue or Scheduled in Detailed Logs.
3. Crew: sign in with your own Crew Code and open Tasks. Check the assigned task instructions and due time.
4. Complete the actual work, then supply the required proof and submit the completion using the action shown.
5. If something cannot be completed safely, tell the manager. Do not mark it complete merely to clear the list.
6. If assigned tasks are missing, check the employee's active status, role, outlet, task schedule and crew-task access.

Check before moving on

A low completion rate is a prompt to investigate workload, assignment and evidence. It is not a standalone judgment of employee performance.

Build the weekly shift roster

Define shifts first, then assign them to employees at the selected outlet.

Outlet selector, week controls and per-person roster. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Open Shift Management. Choose the outlet in SELECT OUTLET.
2. Open Templates and create the required shift definitions with names, start times and end times.
3. Return to Roster and choose the week. Find the employee row and the correct day.
4. Use the roster cell's assignment controls to allocate a defined shift. Use Mark Day Off where appropriate.
5. Review coverage, hours and outlet selection. Duplicate this week's schedule only after checking it is the correct source week.
6. Use Share Roster to review the message and period before sharing. Staff can check their personal shifts in the crew app.

Check before moving on

"No shifts defined" means you need shift templates for that outlet. Punctuality reports require roster assignments with meaningful start times; an attendance scan alone is insufficient.

Run attendance and the store kiosk

Attendance records clock-in/out; the roster records the expected shift. The store kiosk must be configured for the right business and outlet.

Dashboard, attendance reports, settings and authorised kiosk launch. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Manager: open Attendance > Dashboard and review Today's Logs and pending leave requests.
2. Use Launch Kiosk only on the authorised store device. Confirm its business and outlet setup; do not use a generic kiosk link as a substitute.
3. Crew: use the store's authorised attendance process to scan/check in. Confirm the success message before starting work.
4. At the end of the shift, check out and confirm success. A page loading or a scan opening is not proof of a saved attendance event.
5. If a kiosk says it needs a business link, ask the manager to relaunch/configure it from Attendance at the outlet.
6. Use Report for history, Leave balance for balances, and Settings for authorised attendance configuration. Use Log Leave on Behalf only for a checked, legitimate request.

Check before moving on

Do not clear browser storage or reset a working store device without a plan to reconfigure it. If check-out fails, note the time and tell the manager; do not invent a replacement attendance record.

Create and publish training

Choose Theory for self-completed reading/video learning, or Practical for manager-led competence checks.

USER GUIDE DEMO · Fictional data · Read-only

GREEN NEKO · PEOPLE STANDARDS

Training

Content completion is not certification.

Dashboard Progress **Modules** Assignments

+ New module

Create training module

Draft changes create a new version. Publish only after the content, role and outlet settings are correct.

Module title
The name managers and employees will see.

Training track
Choose Core Staff, Barista, Kitchen, or Manager.

CORE STAFF

Training type
Theory ends when staff read or watch and tap Complete. Practical follows the manager-led skill-check flow.

Practical — manager-led skill check

Training instructions
The standard employees must learn. Include the procedure, expected outcome and escalation points.

Actual training editor: title, track, type, requirements and status. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Open Training > Modules > New module. Enter the title, track and Training type.
2. Write clear instructions with expected standards and escalation points. Select applicable outlets and roles.
3. For Theory, add the video/content controls shown. Preview playback on both desktop and the crew phone before assignment.
4. For Practical, review supervised attempts, minimum passing score, validity period and safety warnings.
5. Keep Module status as Draft while preparing it. Check all settings before selecting Published and Save version.
6. When editing published content, include a change summary and review the version. Archive retired modules; do not erase historical results.

Check before moving on

A video file extension alone does not guarantee playback compatibility. Where the app reports encoding problems, use a compatible MP4/H.264/AAC source and test the assigned crew view. Draft and archived modules cannot receive new assignments.

Assign, complete and certify training

Employees receive individual assignment records, even when you select a role or group.

How to use it

1. Manager: open Assignments, select a published module and use the employee/role/outlet/all-eligible selection controls.
2. Review recipients, mandatory status, due date and reason before assigning. Outlet and role applicability must be correct.
3. Theory crew: open assigned training, read the instructions or watch the video, then use Complete when finished.
4. Practical crew: read the current status and manager feedback. The manager records practical progress; crew do not certify themselves.
5. Manager: use Dashboard/Progress to inspect each assignment. Demonstrate means you show the method; Practice records an observed attempt; Pass Practical records the assessment outcome.
6. Use Retraining when the standard is not met. Certify only after the required checks pass. Check expiry, notes and employee identity before confirming.

Check before moving on

Theory completion is not a practical qualification. Practical certification must be recorded by an authorised assessor; managers must not certify themselves. A critical failure requires retraining, regardless of a numerical score.

Use Employee Development

Combine operational evidence with coaching. Missing data should be read as unavailable, not automatically as poor performance.

Filters, overview measures and coaching workspaces. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Open Employee Development > Overview. Filter outlet, department, role, employee and the data period.
2. Review attendance reliability, training completion, certification coverage and operational risks.
3. Use Skills Library to define relevant skills and link certification modules where appropriate.
4. Open Skills Matrix or Employees to inspect an employee profile and evidence.
5. Add factual manager observations, coaching actions and development goals. Make feedback specific and respectful.
6. Use Development to follow goals and Recognition to acknowledge achievements. Crew can use Growth for their personal development information.

Check before moving on

The first implementation does not provide every advanced career-path, numeric manager-rating or reporting feature. Objective scores are guidance based on available records, not automatic promotion or employment decisions.

Check order completeness before delivery

Order Accuracy is a packing check, not the POS and not proof that payment was received.

Manager view: date/outlet filters and validation logs. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Crew: open the authorised Order Accuracy feature and choose Scan Receipt.
2. Take/upload a readable image using the available control. Allow camera access only on a trusted device when needed.
3. Review the extracted order ID and every item. Correct recognition mistakes before proceeding.
4. In Verify Items & Packaging, check each item, quantity and required extras against what is physically packed.
5. Add packaging photos where required and submit using the confirmation action shown. Only hand over after the check is complete.
6. Manager: use Order Accuracy filters and Validation Logs to review order details, item validations and evidence.

Check before moving on

Receipt recognition can be wrong. Do not trust it without checking the original order. Do not expose customer names, receipts or delivery details in public screenshots.

Read attendance and task reports

Choose the period first. A new workspace can legitimately show no results until daily activity is recorded.

Operational Reports

DATE RANGE: 05/10/2026 to 05/10/2026 | STORE: All Stores | EMPLOYEE: All Employees | **Run Report**

Punctuality Log | Punctuality Scores | Task Performance

Consistent Latecomers (Heatmap Basis)

RANK	EMPLOYEE	INCIDENTS ≤ 10M	INCIDENTS > 10M	TOTAL LATE TIME
No lateness recorded for this period.				

Individual Incident History

DATE	EMPLOYEE	SCHEDULED	ACTUAL IN	VARIANCE	OUTLET
------	----------	-----------	-----------	----------	--------

Date range, store/employee filters and the three report tabs. Actual Neko Pulse screen; fictional demo data. Zoom for detail.

How to use it

1. Open Reports. Set both dates, Store and Employee, then choose Run Report.
2. Punctuality Log shows late-arrival and absence incidents; on-time employees may not appear in the incident list.
3. Punctuality Scores summarises the employees for whom scheduled shifts were analysed. Check roster and attendance completeness first.
4. Task Performance shows completion trends and task-ranking breakdowns for the selected period.
5. If the report is empty, broaden the date range and confirm active employees, active outlets, shifts and logs exist.
6. If Report could not be loaded appears, retry once. Report permission/index errors to the platform operator instead of assuming records were deleted.

Check before moving on

The default period may start at the current week. Scores use the current report formula and filters; verify individual incidents before taking management action.

Prepare HR letters and documents

Review every generated letter before sharing it. The tool prepares documents; it does not replace employment or legal review.

How to use it

1. Open HR & Letters. Review company assets, letterhead details and relevant templates in the configuration area.
2. Select the employee in the operations area and check their name, joining date and other relevant details.
3. Open Letters and choose the required available letter type. Complete any salary or leaving-date prompts carefully.
4. Generate the document and inspect the preview/print output before downloading or printing.
5. Use Documents to upload and organise the permitted employee records.
6. Share only with the intended recipient through the appropriate private channel. Keep employee data off public devices.

Check before moving on

Generated joining, experience, relieving, salary or bank-related documents must match verified facts and the applicable company policy. Do not assume an email was sent just because a document was generated.

Recognition, login audit and maintenance

These modules affect evidence and accountability. Treat deleting records as a separate, deliberate decision.

How to use it

1. Emp. of Month: use Cycles to define the period, Scoring for authorised inputs and Results for the calculated breakdown. Check eligibility and evidence.
2. Login Activity: filter/search recent login records by person, store or account type. Refresh if needed.
3. Clear logs permanently removes the login audit history. Export/preserve needed evidence and obtain business approval before clearing.
4. System Maint.: choose the record category and retention period, analyse the affected records and review the cutoff.
5. Download the offered backup before deletion. Confirm its contents and preserve it securely; an export is not necessarily a full database restore backup.
6. Proceed with the confirmation step only if retention policy, reporting needs and record obligations have been checked.

Check before moving on

Deleting attendance, task logs or roster history can change future reports and development measures. Maintenance is not an everyday crew task. Never delete records simply to make a dashboard cleaner.

Optional modules and tenant boundaries

Your restaurant workspace is a tenant. It holds your outlets, people and operational records separately from other businesses.

How to use it

1. Operate all of your outlets inside the appropriate business workspace. A second outlet is not automatically a second tenant.
2. If Kitchen Recipes is enabled for your workspace, treat it as a separate reference module and follow your organisation's recipe owner instructions.
3. Platform Administration appears only for a separately authorised platform account. Restaurant owners should not expect tenant creation or subscription controls there.
4. Do not share tenant links, manager sessions or employee codes with another business.
5. If you cannot see an expected outlet or module, ask the owner to review your active membership, assigned outlets and role permissions.
6. For billing or trial continuation, use the subscription process the platform operator provides. Do not assume payments are enabled because a trial is active.

Check before moving on

This guide covers restaurant operations. It does not claim that automated billing, facial attendance or computer-vision features are available. Some modules may be disabled or retired by your administrator.

Troubleshooting and your daily routine

Use this checklist before reporting a problem. Do not reset devices or create duplicate records as the first response.

How to use it

1. Cannot sign in: check the correct app URL and login type. Owners/managers use Manager sign in; crew use their assigned code. Do not repeatedly guess credentials.
2. Missing module/data: check active profile, role permissions, outlet assignment and selected dates. An owner seeing a module does not prove crew have access.
3. Missing task/training: confirm assignment, outlet/role eligibility and publication/schedule status. Refresh after saving changes.
4. Video does not play: check connectivity and use a current browser; report the exact message and module name. Managers should test the same assigned version.
5. Morning: confirm attendance, check the roster and review tasks. Manager: start with Today's Overview and resolve priority actions.
6. Before closing: finish or explain outstanding tasks, review incidents and attendance, complete the outlet closing process and check out.

Check before moving on

When reporting an issue, include module, time, device/browser, outlet and exact message. Share screenshots privately and hide personal details. Never send passwords, PINs, tokens or service-account keys.

Guide maintenance: update screenshots when navigation changes. Source edition: local app based on main ac86e49 plus the onboarding draft; real-device installation and live signup delivery require separate acceptance tests.

Owner hub

Find the module cards. Your visible cards depend on permissions.
